

MARITIME DECARBONISATION, EUROPE

CONFERENCE | AWARDS | EXHIBITION

24-25 September 2024 • Amsterdam

Start-up of the Year Award

Recognising an embryonic company with demonstrated potential to be a gamechanger when it comes to vessel optimisation, maritime decarbonisation and sustainability.

Armada Technologies

Developer of Passive Air Lubrication System (PALS). Uses ship's forward motion for air-water mixture lubrication. Consumes less power than traditional methods.

Rotoboost

A low-carbon energy solution company, established in Norway, operating globally in UAE, Malaysia, China and Finland. Utilizing innovative Thermo-Catalytic Decomposition (TCD) technology to produce hydrogen, liquid fuel, and high-value solid carbon for various industries. For marine ROTOBOOST applies TCD for pre-combustion carbon removal for decarbonization and methane slip abatement.

Sealution

Real-time onboard sensor reporting through IoT solutions. Enhances safety management and efficiency, particularly for alternative fuels.

Smartsea

Maritime management platform offering modules for crew management, maintenance, insurance, operations, and inspections.

Syroco

Syroco Live web-based software and Onwatch voyage monitoring service. Uses digital twin, AI, and machine learning to calculate optimised voyages. Updates routes considering constraints like arrival time, seakeeping, and safety.
